

Fit Call and Workflow Diagnostic

Artefact register, stage gates and operating map

Owner	Heutrix Pty Ltd accountable roles to be ratified
Version	1.0 1 August 2026
Offer	One-workflow Workflow Diagnostic AUD 950 plus GST
Status	Operational draft legal pack stop-issue items still apply

Use rule: Start with the free fit call. Offer the paid Diagnostic only when one workflow can be defined, the client can work with non-identifying evidence, and the expected outcome matches the signed Order Form.

Legal readiness: The existing Client Legal Pack is a first draft for solicitor review. Verify the entity, ABN/GST, insurance, addresses, approved systems, privacy contacts and signing authority before first client issue.

1. Pack contents

ID	Artefact	Class	Purpose
00	Artefact Register	Internal	Shows which artefact is used at each stage and the minimum control gates.
01	Fit Call Playbook and Scripts	Internal	Runs the 30-minute call, qualifies fit and records the decision.
02	Workflow Diagnostic Delivery Playbook	Internal	End-to-end SOP from signed order through acceptance and secure closeout.
03	Client Forms and Communications	Controlled template	Reusable intake, preparation and email templates.
04	Findings Report Template	Client confidential	Editable report structure aligned to the contracted deliverables.
05	Diagnostic Working Workbook	Internal / client confidential	Qualification, evidence, process, analysis, opportunity and QA registers.
06	Workflow Maps and Findings Deck	Client confidential	Editable current-state, future-state and presentation template.

2. Existing legal artefacts used with this pack

Before exchanging non-public information. Use the Mutual Confidentiality Agreement where required. Do not invite sensitive information into a fit call.

Every paid Diagnostic. Issue and sign the Client Services Agreement plus the Workflow Diagnostic Order Form before work starts.

Any protected data or system access. Complete Data and System Access Authorisation before access is granted. The Diagnostic default remains no Personal Information or sensitive information.

Any AI use. Complete the AI Use Case Approval for one tool and one use case. No client data is approved for AI by silence.

Any scope, fee, timing, tool or data change. Use the Change Request before the changed work proceeds.

Acceptance and close. Use Deliverable Review and Acceptance, then Handover and Access Closure.

3. End-to-end operating map

Stage	Name	Work	Output	Gate
0	Enquiry	Non-identifying problem description	Fit call booked or declined	No sensitive information received
1	Fit call	30-minute structured call	Proceed / clarify / do not proceed	One workflow and safe data path defined
2	Commercial activation	CSA + Order Form + payment	Project authorised	Signed contract and cleared payment
3	Kickoff and evidence	Scope, data check, max 5 documents / 50 pages	Workshop-ready evidence set	Owner, attendees, dates and repository confirmed
4	Discovery workshop	Up to 90 minutes / up to 4 participants	Validated current-state capture	Start/end, roles, steps, decisions and exceptions recorded
5	Analysis and design	Map, root-cause and opportunity analysis	Draft deliverable set	Facts, assumptions and recommendations separated
6	Internal QA	Independent review where practical	Client-ready draft	Scope, privacy, logic and acceptance checks pass
7	Findings presentation	Up to 60 minutes	Questions, decisions and corrections logged	Material questions recorded
8	Acceptance and closeout	Five-day review + one correction round	Accepted and securely closed	Access removed and data disposition recorded

4. Control points that cannot be skipped

[]	Fit call notes contain no patient, participant, worker or other sensitive identifying information.
[]	The workflow is one operational workflow with an agreed start and end.

[]	The client understands the Diagnostic is evidence-led advice, not implementation, assurance or an audit.
[]	The Client Services Agreement and Workflow Diagnostic Order Form are signed before paid work starts.
[]	Payment and the agreed inputs are received before the delivery clock starts.
[]	Only the approved repository and approved named users are used.
[]	AI is not used with client confidential information or client data without a signed AI Use Case Approval.
[]	Every finding is traceable to evidence, an observation or an explicitly labelled assumption.
[]	The report, maps, opportunity list and presentation tell the same story.
[]	Acceptance, handover, access removal and data return/deletion are recorded at close.

5. Role model

Governance gap: Named founder assignments in the current planning notes are recommendations, not ratified appointments. Use the functional roles below until Heutrix formally assigns named owners.

Role	Accountability
Commercial Lead	Owns enquiry, fit decision, offer accuracy, client identity and contract issue.
Engagement Lead	Accountable for scope, workshop, analysis, deliverables, client communication and schedule.
Facilitator	Runs the workshop, keeps scope narrow and draws out workflow evidence.
Analyst	Maintains working papers, maps, findings, opportunity scores and decision trail.
Quality Reviewer	Challenges scope drift, unsupported claims, map consistency and acceptance readiness.
Privacy / Security Reviewer	Approves data, repository, access and any AI exception before use.
Client Project Owner	Confirms facts, consolidates feedback, coordinates attendees and accepts deliverables.

6. File and record structure

- Use a project ID in the form HTX-WD-[YYYY]-[NNN]-[CLIENT SHORT NAME].
- Keep 01 Contract, 02 Client Inputs, 03 Working Papers, 04 Draft Deliverables, 05 Issued Deliverables and 06 Closeout as separate folders in the approved repository.
- Use ISO dates in file names: YYYY-MM-DD. Use version labels v0.1, v0.2 for drafts and v1.0 for the accepted issue.
- Never store credentials, unapproved personal information or raw recordings in the project folder.
- Keep one evidence register and one decision log as the source of truth; do not create competing copies in email and personal notes.

7. Definition of done

[]	All contracted deliverables exist in editable and agreed issue formats.
[]	The current-state map covers the agreed start/end, roles, handovers, decisions and known pain points.
[]	The future-state map shows recommended ownership, controls and material changes.
[]	The opportunity list is prioritised with rationale, dependencies and a high-level implementation option.
[]	The report distinguishes evidence, assumptions and recommendations.
[]	The findings session is completed and material questions are recorded.
[]	The consolidated correction round is completed or formally waived.
[]	Deliverable review, handover, access closure and data disposition are recorded.

Source alignment

This artefact is aligned to the Heutrix Instructions, Voice and Notes dated 31 July 2026; the Heutrix Client Services Agreement v1.0; the Workflow Diagnostic Order Form v1.0; and the Project Control Forms v1.0. If a signed client document differs, the signed document controls.
