

Workflow Diagnostic

[Client name] | [Workflow name]

Client	[Client legal name]
Project ID	[HTX-WD-YYYY-NNN-CLIENT]
Workflow boundary	[Start event] to [end event]
Prepared by	[Heutrix Engagement Lead / Analyst]
Issue	[Draft v0.1 / Final v1.0] [YYYY-MM-DD]
Data classification	CLIENT CONFIDENTIAL approved project repository only

Template instruction: Replace all [square bracket] prompts, remove instruction boxes and verify every statement against the working papers before client issue.

Service boundary: This report is an operational workflow diagnostic. It is not implementation, legal, clinical, medical, tax, employment, regulatory, official audit, NDIS registration or compliance assurance advice.

1. Executive summary

Drafting prompt: In 150-250 words: state the workflow, the decision it supports, the two or three most important findings, the recommended direction, the main dependency and the immediate next action. Do not repeat the whole report.

[Client] asked Heutrix to review [workflow] from [start] to [end]. Based on [evidence set], the workflow's main constraint is [root cause], which contributes to [observed impact]. Heutrix recommends [direction] because [rationale]. The first decision is [decision], owned by [role], by [date].

2. Engagement scope and decision

Field	Response
Workflow in scope	[Exact signed scope]
Start event	[]
End event	[]
Decision supported	[What the client should decide after reading]
Client Project Owner	[Name and role]
Workshop participants	[Names and roles]

Explicit exclusions	[Adjacent workflows, build, assurance and other exclusions]
Special conditions	[None / list]

3. Method, evidence and limitations

Heutrix used a structured fit and mobilisation process, a kickoff and data-handling check, one discovery workshop, limited document review, current-state analysis, future-state design and internal quality review.

Evidence reviewed

ID	Source	Date / version	Use	Confidence / limitation
E-01	[Document / workshop / data]	[]	[What it supports]	[High / medium / low and why]
E-02	[]	[]	[]	[]
E-03	[]	[]	[]	[]

Limitations

- The Diagnostic relies on information supplied by the Client and is not an independent audit or verification of compliance.
- The evidence set was limited to [items / pages] and the workshop participants listed above.
- No Personal Information or sensitive information, production access or client-data AI use was approved unless expressly stated here: [state approved exception or 'none'].
- Quantitative impacts are estimates unless the source, period, method and assumptions are shown.
- Unresolved facts or contradictions are listed in the assumptions and decisions section.

4. Current-state workflow

Map placement: Insert the current-state map here or reference the issued editable map. It must use the same step, pain-point and evidence IDs as this report and the working workbook.

[Insert current-state map image or concise map reference]

How the workflow operates

[Explain the normal path in clear prose. Focus on trigger, ownership, decisions, handovers, systems and completion. Keep exceptions to those that materially affect the findings.]

Material exceptions

ID	Exception	Current response	Observed consequence
EX-01	[]	[]	[]
EX-02	[]	[]	[]

5. Findings and root causes

Writing standard: State the observed condition, evidence, consequence, root-cause hypothesis and confidence. Avoid language that implies a compliance breach unless a qualified service and evidence support that conclusion.

ID	Finding	Observation	Evidence	Impact	Root cause / confidence
F-01	[Finding title]	[Observed condition linked to steps/pain IDs]	[Evidence IDs]	[Operational impact]	[Root cause / confidence]
F-02	[Finding title]	[]	[]	[]	[]
F-03	[Finding title]	[]	[]	[]	[]

6. Future-state workflow

Map placement: Insert the future-state map here. Make changed ownership, information capture, status visibility, controls, human review and handovers explicit.

[Insert future-state map image or concise map reference]

Design principles

- [Principle tied to finding, e.g. one accountable owner for the next action.]
- [Principle tied to information, e.g. capture once at the earliest reliable point.]
- [Principle tied to visibility, e.g. one status view with ageing and exception flags.]
- [Principle tied to control, e.g. defined human review before a material decision.]
- [Principle tied to technology, e.g. configure approved existing tools before custom build.]

Material changes

Change ID	Current state	Future state	Owner	Control / dependency
C-01	[]	[]	[Role]	[]
C-02	[]	[]	[Role]	[]
C-03	[]	[]	[Role]	[]

7. Prioritised improvement opportunities

Scores support ordering and are not an implementation approval. Any data, security, access, AI, clinical or regulatory dependency must be resolved before work begins.

ID	Opportunity	Findings	Score	Priority	High-level option	Dependencies
O-01	[Opportunity]	[Finding IDs]	[Score]	[P1/P2/P3/Park]	[Process / configure / low-code / build / controlled AI / no change]	[Dependencies]
O-02	[]	[]	[]	[]	[]	[]
O-03	[]	[]	[]	[]	[]	[]

8. Implementation options

Option	When it fits	Advantages	Trade-offs / gates
Process and ownership change	Problem is caused by unclear rules, roles or handovers.	Fastest; low technical dependency.	Requires adoption, management follow-through and monitoring.
Configure approved existing tools	Current platform can support fields, status, alerts or views.	Lower maintenance; familiar environment.	Platform limits, permissions and governance still apply.
Low-code workflow	Defined repeatable rules need orchestration or visibility.	Can reduce manual coordination.	Requires ownership, testing, support and change control.
Tailored internal system	Need cannot be met maintainably in approved tools.	Can fit the workflow closely.	Higher cost, delivery risk and ongoing support responsibility.
Controlled AI assistance	A bounded drafting, summarising or extraction use case has suitable data and review.	May assist repetitive knowledge work.	Requires approved tool/use case, input limits, human review and monitoring.
No project	Benefit is insufficient, evidence is weak or change risk is disproportionate.	Avoids unnecessary spend and complexity.	Document what would justify reconsideration.

9. Recommended sequence

Horizon	Action	Owner	Evidence of completion	Dependency
0-30 days	[Immediate process, ownership or evidence action]	[Role]	[Observable result]	[]
31-60 days	[Configuration, pilot or control action]	[Role]	[Observable result]	[]
61-90 days	[Evaluate, scale, build decision or stop]	[Role]	[Observable result]	[]

10. Risks, assumptions and decisions

ID	Type	Statement	Owner	Action / due	Status
R-01	Risk	[]	[]	[]	[Open]
A-01	Assumption	[]	[]	[]	[To confirm]
D-01	Decision	[]	[]	[]	[Made / due]

11. Measures for a future implementation

No guarantee: These are proposed measures, not promised outcomes. Establish a baseline, owner, method and review period before using a metric to judge success.

Measure	Definition	Baseline	Method / source	Owner	Review point
[Cycle time]	[Start-to-end definition]	[Unknown / value]	[]	[Role]	[Date]
[Overdue items]	[Threshold and denominator]	[]	[]	[Role]	[Date]
[Rework]	[What counts as rework]	[]	[]	[Role]	[Date]
[Visibility]	[Status completeness / review cadence]	[]	[]	[Role]	[Date]

12. Next-step decision

Field	Response
Recommended decision	[Proceed to a defined next step / complete process changes / gather evidence / no project]
Decision owner	[Role / name]
Decision due	[YYYY-MM-DD]
Immediate action	[Action, owner and due date]
Separate scope required	[Yes / no; describe]
Residual limitation	[What remains unresolved]

Appendix A - Acceptance self-check

[]	Current-state map covers the agreed start/end, material roles, handovers, decisions and known pain points.
[]	Future-state map shows recommended ownership, controls and material changes at a practical level.
[]	Opportunity list is prioritised with rationale, dependencies and a high-level option for each material item.
[]	Report addresses the agreed workflow and distinguishes evidence, assumptions and recommendations.
[]	Findings presentation walkthrough is completed and material client questions are recorded.

Appendix B - Issue record

Version	Date	Status	Prepared by	Reviewed by	Change summary
v0.1	[YYYY-MM-DD]	Draft	[]	[]	Initial client draft
v0.2	[YYYY-MM-DD]	Correction	[]	[]	[Consolidated correction summary]
v1.0	[YYYY-MM-DD]	Final	[]	[]	Accepted issue

Source alignment

This artefact is aligned to the Heutrix Instructions, Voice and Notes dated 31 July 2026; the Heutrix Client Services Agreement v1.0; the Workflow Diagnostic Order Form v1.0; and the Project Control Forms v1.0. If a signed client document differs, the signed document controls.
