

# Before buying another tool, answer five questions.

## Start here

Choose one recurring workflow.

## Then ask

Trigger. Owner. Information. Exception. Finish.

# How does work start? Who acts next?

## 01 Trigger

What starts the work?

## 02 Owner

Who is accountable for the next action?

# What is needed? What if it breaks?

## **03 Information**

What is needed, and where should it live?

## **04 Exception**

What happens when the normal path breaks?

# What does done mean?

## **05 Finish**

What closes the item?

## **Accountability**

Who confirms it is done?

# A clearer workflow comes first.

## **Consider the options**

Simplify. Clarify. Track. Automate. Build. No build.

## **A useful starting point**
