

01 / Diagnose

Understand the workflow

Agree its boundary, users and current state.

Establish the baseline

Record what is known and what needs measuring.

Within implementation

This does not require a separate Diagnostics purchase.

02 / Triage

Design the future state

Clarify responsibilities, dependencies and controls.

Agree acceptance

State what the workflow must do and how it will be checked.

03 / Build

Implement the smallest useful change

A process change or existing-system configuration may be enough.

Test with users

Check the agreed workflow before acceptance.

04 / Handover

Guide the team

Make normal steps and exceptions understandable.

Transfer ownership

Agree access, documentation, maintenance and limitations.
