

Can I use AI for this task?

Three pathways

Approved. Prohibited. Conditional / review required.

Start with the task

A tool account alone does not approve a use case.

Approved

Assessed and recorded

The task, tool, information and intended output are defined.

Human review

A responsible person checks the output before use.

Prohibited

Outside the boundary

For example: personal or sensitive information in an unapproved public AI tool.

Accountability remains

AI must not quietly take over an important decision.

Conditional / review required

An open question remains

Purpose, information, settings, access, retention or reviewer.

Before use

State and resolve the required conditions. Unassessed use stays in review.

Make the decision usable.

Record the context

Owner, tool, information and intended output.

Record the decision

Reviewer, outcome, decision date and next review date.

A practical next step

Test one proposed task

Use non-sensitive or synthetic information while assessing it.

Keep a person accountable

A register supports decisions; it does not grant automatic approval.
