

AI Guardrails Staff Starter Pack

A practical starting point for classifying administrative AI use cases, setting information boundaries, naming accountable human review and recording escalation. It is designed for disability support providers first and selected allied health practices second.

How to use this workbook

- 1 Use the Decision Guide before anyone enters information into an AI tool.
- 2 Record each proposed task on the Use Case Register and classify it as a candidate, conditional or prohibited pending review.
- 3 Use the Staff Checklists before prompting, before using an output and when closing the task.
- 4 Escalate uncertainty to the organisation's authorised owner. Do not treat this starter pack as approval.

Information boundary

Do not enter personal, sensitive, confidential, credential or client information into a public or unapproved AI tool. This is an operational starter template, not legal, privacy, clinical, employment, regulatory or compliance advice, and it is not sufficient for every AI use case.
