

Enquiry-to-Service-Start Visibility Starter Kit

A disability-provider-first operational tracker for making owner, status, next action, due date, exception and readiness decisions visible. Selected allied health practices can adapt the terminology for referral and appointment workflows.

How to use this workbook

- 1 Agree the workflow boundary and status definitions before entering records.
- 2 Copy the Live Tracker into an owner-approved system and use only the minimum information needed.
- 3 Review attention items, ageing, exceptions and decisions at an agreed rhythm.
- 4 Change fields only when a named owner agrees what decision the field supports.

Information boundary

The template is not an approved client-data store. Use synthetic or appropriately de-identified information until your organisation has approved purpose, access, storage, retention and deletion. Do not place participant, patient, clinical, credential or other sensitive detail in this workbook.
