

20-Minute Workflow Bottleneck Scorecard

A practical way to compare recurring operational workflows and choose one evidence-backed starting point. Designed for Australian disability support providers first and selected allied health practices second.

How to use this workbook

- 1 List up to 12 recurring non-clinical workflows on the Score My Workflows sheet.
- 2 Rate each factor from 1 to 5 using the Rating Guide. Use evidence, not frustration alone.
- 3 Check the control flag before treating a high score as ready for change.
- 4 Use the Dashboard to choose one workflow for a bounded review or more evidence gathering.

Information boundary

Use only general, non-sensitive workflow descriptions. Do not enter participant, patient, worker, clinical, credential or other personal or sensitive information. This scorecard supports operational prioritisation; it is not legal, privacy, clinical, regulatory, audit or compliance advice.
